

DESCRIPTION

The Timer Control Module (P/N C3-104) is a microprocessor-based, digital controller that provides an output on/off signal based on selected scheduler settings. Select the number of events per day, length of event, cycle window (hours during the day) and days of the week. The module is easy-to-read, easy-to-use and simple to install. It is housed in a robust, water tight housing with a sealed connector. The flexibility of the module matches functionality with application requirements.
